

Social Science Working Group – Principles

- Prioritize outreach and collaboration among social scientists and integration of social science data across scientific disciplines, institutions, and geographies in the Narragansett Bay region.
- Emphasize practical applications of the most current social science concepts that can inform environmental decision-making across spatial scales.
- Consider the drivers and impacts of change on individuals, institutions, and communities.
- Elevate voices, study, and service to historically underserved communities.
- Focus on social science data that can be quantified and tracked over time.
